Abstract

A modern buzzword in society is Disruptive Technologies. Many such technologies have a strong location connection. In order to review their impact, it is important to understand what is really meant by disruptive technologies and ask whether they are really so disruptive (and not just hyped). This presentation aims to explore the implications of disruptive (geo)technologies for individuals, organisations, and academia. It ends with a set of concluding reflections and propositions as food for thought.

Keywords: disruptive innovations, geo-technologies, hype, impacts
